

FORMULA 7[®] ROUND POSTS

UTILITY GRADE ROUND POSTS

- **A modern alternative to Creosoted treated posts**

FORMULA 7[®] Posts have been developed in conjunction with preservative manufacturers as a credible replacement for creosoted fence posts. FORMULA 7[®] Posts have been developed based on experience gained from Copper Azole treated Utility Poles in countries such as France, Switzerland and Germany, where copper based treatments have been preferred over Creosote for over 20 years.

- **30 Year Desired Service Life backed up by a 20 year warranty**

FORMULA 7[®] Posts are specified to achieve a 30 year desired service life in Irish/UK conditions. This means that in good conditions and utilising recommended installation techniques, FORMULA 7[®] treated wood can last up to 30 years in ground contact.

- **Exclusively produced from slow grown Scot's Pine timber**

Scot's Pine is the only timber species that will retain enough preservative to meet the FORMULA 7[®] Specification. Logs are primarily sourced from FSC certified alpine forestry in Central and northern Europe.

- **Advanced Production Process**

FORMULA 7[®] posts are Kiln dried to reduce moisture content before being treated with Copper Azole (CA) preservative in automated computer controlled pressure treatment plants using a cycle of vacuum and pressure to achieve unmatched retention levels of the preservative fluid and deeper penetration into the wood.

- **Unmatched Preservative Retention Levels for longer life**

- **Independently audited Production**

FORMULA 7[®] production sites are audited **4 times per year by independent outside agencies** to ensure consistent quality.

- **Each Post marked with ID tag for traceability**

- **Safe for installers and users**

FORMULA 7[®] treated wood is free from harmful Arsenic and Chromium. It is friendly to the environment and safe to install in areas such as gardens and playgrounds.

- **Approved for TAMS and Forestry Grants in Ireland**

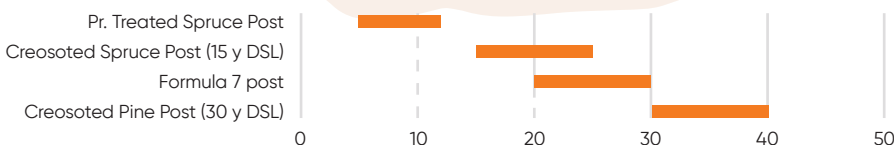

FORMULA 7[®] Posts & Rails are approved for schemes requiring IS 436 certified fencing materials.

- **20 year Warranty available to the end user with registration**

End Users of FORMULA 7[®] treated wood can avail of a 20 year warranty. (Terms, Conditions and registration fee applies)

- **How do FORMULA 7[®] Posts compare to other treated posts?**

Estimated Lifespan in Ground Contact (Years)

Slow Grown Pine

Kiln Dried

Utility Grade Treatment

30 year desired life

20 year warranty available with registration

Full Sapwood penetration is specified for Formula 7[®] Treated Wood.
